# Axia iPlay Network Stream Player for Windows

OVERVIEW

Axia iPlay is a software-based IP-Audio monitoring program lets Windows PC users select and listen any audio source available to their Axia network. Choose from a complete list of available streams; eight user-programmable preset uttons provide quick access to frequently-accessed channels. On-screen level display meters auditioned audio.

FEATURES

- Allows listening to any Axia network audio stream using standard PC sound card/speaker combo or headphones.

- Automatic detection of Livewire audio sources from connected PCs.

- User friendly interface allows filtering and sorting Livewire channels, making it easy to navigate in big systems containing hundreds or thousands of Livewire channels.

- Preset buttons that allow quick access to eight pre-selected channels.

- Administrator can restrict access to a set list of audio channels using built-in Access Control Lists

IN DEPTH

Turn Any PC Into a Listening Station.

Remember the days when giving your Sales Manager a listening station meant running cable through the ceiling, installing a selector panel in the office wall, and mouting speakers in the drop tiles? And then, he could only hear a limited number of the audio channels your plant produced.

Axia iPlay PC software does away with old-fashioned speaker wire and rotary selectors. It allows any Windows PC to listen to streamed audio directly from your Axia network -- any streamed audio. Not just Program feeds, but saellite downlinks, remote hosts, news production studios, interview rooms, etc. iPlay lets you give PC monitoring capabilities to PDs, GMs, and sales staff using their existing computers, with no special wiring required. Just connect their PC's NIC to your Axia network, install iPlay, and presto! Every PC is a listening station. There's even an on-screen level display that meters the audio you're listening to -- great for use as confidence meters for PDs or production personnel.

Users can choose from a list of all available audio, but in big plants that can be a lot to sift through. Not to worry: they can pre-set their favorite channels on the eight user-programmable preset buttons to get quick access to the streams they listen to most. And of course, you can filter out raw mic channels or other selected audio streams to prevent unauthorized listening.

SPECIFICATIONS

System Requirements

- Windows 2000 Professional, Windows XP Professional, Windows Vista (32- and 64-bit editions), Windows 7 and Windows 7 Pro (32- and 64-bit editions), or Windows 8 operating system.

- 100Base-T or higher wired network adapter.
